Allowable Subject Matter

In response to the rejection of claim 1 over *Meguriya et al.*, Applicant has amended claim such that it is stipulated that the particle size of component (B) is larger than that of (C).

Although there is some probability that this limitation is satisfied by the composition disclosed therein, especially in view of the micrometer-sized diameters possessed by the microballoons, this fact simply cannot be determined in view of the limited description of the additive provided to impart thixotropy. Therefore, the rejection over the reference is hereby withdrawn.

In an updated survey of the prior art, the Examiner did not encounter any documents more germane than that already cited. Akamatsu et al., U.S. Patent # 5,661,203 discloses a composition comprising a liquid organopolysiloxane, hollow thermoplastic particles, and an inorganic thickener but there is no suggestion to treat the surface of said hollow particles with an inorganic compound. Chopin discloses a method of making inorganic compound-treated polymer microspheres and their incorporation into plastics and elastomers but there is no suggestion that they may also be blended with a silicone fluid. Given the shortcomings in these documents, claims 1-10 are now considered allowable.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
